These are instructions how to install multiple version of 20-20 Design on the same computer and how to configure the 20-20 Launch Bar.

**Solution**
1. First steps if the 20-20 Launch Bar was never installed on the computer download the **20-20 Launch Bar** from the attachment below and install it.
2. Prior to installing a new version on the computer the registries for the currently installed version needs to be delete to prevent the new installation to overwrite the previous one.
3. Go to Start then Run (on Windows Vista go to Start and type Run in the search tool) and type **regedit** then click ok
4. Go to **HKEY_CURRENT_USER\Software** right-click and select delete on the following folder "20-20 Reports and 20-20 Technologies"
5- Close the registry editor and install the new 20-20 Design version you want to install.
6- Once the installation is complete, right-click over 1 of the icon of the Launch Bar, this will open the Shortcut Properties.
7- Remove the checkmark next to Disabled for the shortcut you want to set
8- Type a Display name for that version, and click on the button with 3 dots [...
9- Select the new folder where 20-20 Design was installed, if it was installed in "C:\2020V8" go to the C: drive and select the 2020V8 folder.
10- Click on the Save button then close.

![Shortcut Properties](image)

By default the 20-20 Launch Bar comes with 2 shortcut, if you want more then 2 follow these instructions to unlock the Launch Bar.

1- Open the task manager (CTRL+ALT+DEL or CTRL+Shift+ESC) and go to the processes tab
2- Look for a process named Launch2020.exe click on it and click on End Process at the bottom right, click Yes or End Process once prompted.
3- Go to Start then Run (on Windows Vista go to Start and type Run in the search tool) and type regedit then click ok
4- Go to HKEY_CURRENT_USER\Software\Launch2020 on the right pane right-click on beta_mode and select Modify
5- Change the Value data from 1 to 0 then click ok and close the registry editor
6- Go to Start then All Programs and Startup and click on the Launch2020
P.S.: It is possible that both the Launch Bar and a Shortcut Bar from 20-20 opens when starting the computer, to prevent this go to Start then All Programs and then Startup, right-click on the 20-20 Shortcut Bar and select delete, click yes to delete the shortcut.

Technical information:

20-20 Design stores most of its information into the registry editor of Windows, since all the version of 20-20 Design uses the same registry keys only 1 version at the time can be loaded on the computer.

The Launch Bar allows the user to switch between different versions. When the user changes version on the Launch Bar it goes through the following process.

It Unregister the 20-20 Files for the currently used version (regsvr32 -u), then it exports the 20-20 Reports and 20-20 Technologies registry keys from HKEY_CURRENT_USER\Software to the 20-20 Design folder of that version creating 2 .reg files.

Then it creates the registry keys for the new version, either from the 2 .reg files created from a previous switch or from the .reg files located in the "...\mswin\60\reg" folder. Then it registers the files of the new version (regsvr32)
